Design parts and drive your router, mill, or lathe, with ease and precision for 2D, 3D, and multiaxis machining.

With Mastercam toolpaths integrated directly within the SOLIDWORKS environment, the toolpaths are applied directly to the part or assembly. Intelligent use of design tables and multiple configurations makes working with families of parts easy.

As a Certified Gold Product, Mastercam for SOLIDWORKS delivers the absolute best in 2- through 5-axis milling, routing, and turning CAD/CAM integration.

**SOLIDWORKS USERS FEEL AT EASE WITH MASTERCAM**

**Flexible and expandable.**

No matter how complex a part, with toolpath associativity, any modification to the job means the toolpaths are updated immediately. You can also build a library of your favorite machining strategies, apply them to a part, and Mastercam helps adapt them to the new model. Because Mastercam for SOLIDWORKS is a fully integrated SOLIDWORKS Certified Gold Product, it’s fast, easy, and productive — the way programming should be.

Mastercam’s active Stock Model, Toolpath Verification, and Simulation mean increased confidence on every project. Tool library support, including CoroPlus® and MachiningCloud, helps you make tooling decisions fast.

"Mastercam for SOLIDWORKS is making my job easier. I’ve been using Dynamic toolpaths to get better finishes. It works so well that I’m getting work done in half the time."

Nolan Farmer, Owner
Farmer Plastics & Machining, Inc.
